ABSTRACT

For cafe operators, our InternetCafe Management System (ICMS) provides all-inclusive solutions, such as user registration, session monitoring, charging, inventory management, customer service, and reporting. Cafe operators may maximize resource use and guarantee security with simplified user login and session control

OBJECTIVES

The system supports automated invoicing procedures, a variety of payment choices, and real-time session control, resulting in frictionless transactions and increased security. By integrating data analytics, the ICMS enables cafe operators to spot patterns, improve service quality, and increase income.
